NIMBLE THIS PNM PRO OFFERS THE BEST VALUE WITH PRICING TO SUITE MOST CABLE OPERATORS PRICE POINT

PNM technology from Nimble This effectively lowers maintenance costs by identifying upstream and downstream RF impairments, determining their distance, and using correlation groups to pinpoint the location of the impairment, even if it affects multiple subscribers. Our application then helps determine whether the impairment is within the home or outside plant, and associates the MAC addresses of affected cable modems on a user-friendly dashboard and easy-to-read map, making it simple for technicians to quickly address the issue.

Nimble This's Proactive Network Maintenance (PNM) technology helps to quickly identify and resolve network issues by directing technicians to the exact location of impairments, reducing resolution time and catching intermittent issues without the need for expensive test hardware. This leads to decreased maintenance costs for cable operators, reduced blind truck rolls and fewer customer service calls, resulting in improved high-speed data service for subscribers.

Our mobile app is widely popular with the technicians. Try it for yourself!

Our Proactive Network Maintenance also has an App for that! As a result, there is no need for expensive test equipment since our Proactive Network Maintenance technology has an efficient app that allows technicians to have the power of PNM, an Upstream Analyzer, Nimble This' PNM Full Band Spectrum Analysis, Cable Modem Installer, Cable Modem Birth Certificate and a whole lot more all in your smart phone or tablet. Field proven with millions of modems. Manage your field force more effectively saving money and have happy customers in the process.

WHAT SOLUTION IS RIGHT FOR YOUR NETWORK?

Nimble This offers a PNM (Proactive Network Maintenance) platform with four different options:

- Nimble Upstream
- Nimble PNM Basic
- Nimble PNM Pro
- Nimble PNM Enterprise

The platform helps cable operators quickly discover and locate network impairments, lower maintenance costs, and improve broadband service. The platform's graphical map and correlation groups make it easy to identify and troubleshoot issues impacting multiple subscribers, whether they are related to in-home or the outside plant. Nimble This offers a competitive technological advantage, ensuring that cable operators can maintain a stable, efficient, and cost-effective data network, providing the best possible service to both subscribers and operations. Contact Nimble This to let us help determine which features are needed to get your job done.

The technology offered by Nimble This enables cable operators to be proactive in managing their network and providing the best service to their customers.
